Description:

Put up your dukes and become a contender in Konami's newest knockout, *The Final Round*. See how you measure up against the toughest boxers in the world!

Before stepping into the ring, the player chooses his boxer's strength in the following skills: Speed, Power, and Stamina. Then he is ready to face such heavies as Mad Mongol, Red Felco, Knockout Nick, and Steel Flat Fritz, to name just a few.

The power meters at the bottom of the screen show each boxer's strength. Power will decrease according to the punches each boxer takes. With a combination of power-packed punches and some fancy footwork, the player can reduce his opponent's power meter to zero. When the power meter reaches zero, the boxer is knocked down, but not out. He is given until the count of ten to get up again, just like an official boxing match. When the boxer gets back up, his power meter is partially replenished. However, once he gets knocked down three times, it's a knockout.

As any pro boxer does, the player should always work on improving his skills. After winning two bouts, the player is given the chance to enter a training mode. In this training, the fighter can sharpen up one of his three skills. However, the player can choose to skip this stage if he thinks his skills are good enough!

The match is over when the player is knocked out, however, he can insert coins and challenge his last opponent. The official results of each bout will be shown on the screen.
